

Jakob's Principle:- layout of website should be same as already existed  
 Popular website like flipkart and amazon, ola and uber both two have same layout  
 because people are already familiar to that layout so we should use that layout for  
 their convenience

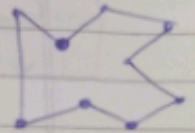

## Figma

Text

① Edit Shapes (⌘) (we can also make text vector by using flatten or right click)

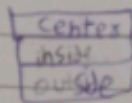

to edit it make it object (⌘)

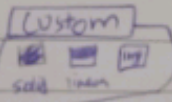

② fill (for background color)

③ Stroke (for border) (as text borders i.e. A = **A**)

width/height

color

advanced stroke

stroke style --- Dash

Dash 4 4

cap 9 2

stroke caps side  
(means which side  
to have stroke)

④ corner radius (r)

⑤ Rotation (b. 4°)

⑥ Text

font-family

Bold

line-height (A)

font-size

letter spacing (A)

Auto width Auto height fixed size

(↔) (=) (□)

Align left

(≡)

Align center

(≡)

Align right

(≡)

Align top

(↑)

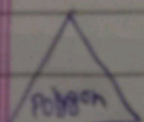

Align bottom

(↓)

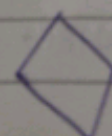

Align middle

(\*)

⑦

count (∴) = 3

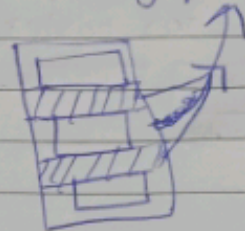

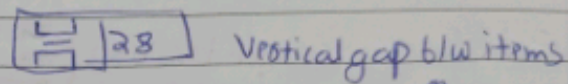

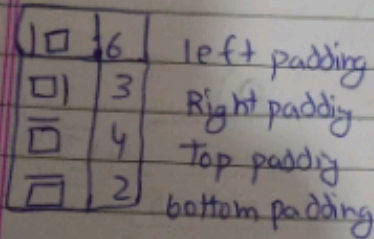

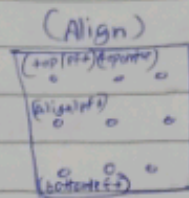

∴ = 4

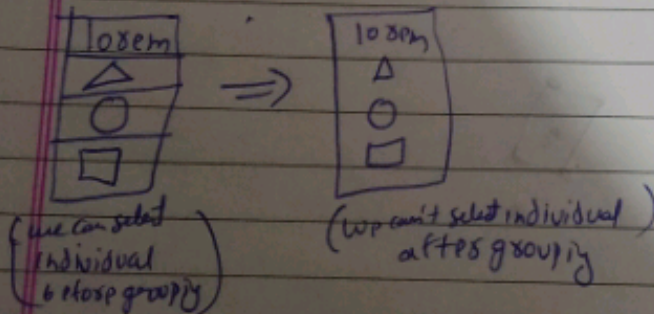

We can use figma tokens to use by default size, space, color, border radius in plugin like we made component **Date: \_\_\_\_/\_\_\_\_/\_\_\_\_**

⑥ layout (#) (Nested layout work) (It is like container)

⑥ Group selection (right click or  $ctrl+g$ ) → make group of selected item in one (Nested group selection work)

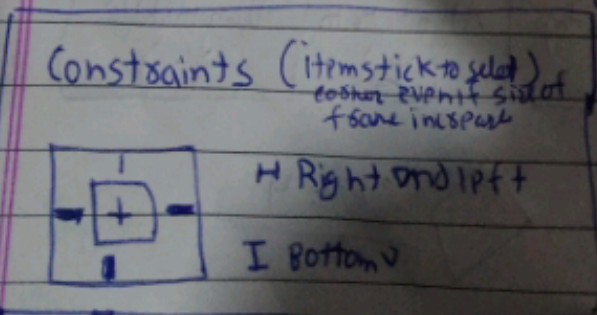

⑥ we can make selected rectangle into layout by (right click)

⑥ Plugin (Install it and then use it using ~~the~~ right click)

⑥ figma constraints ~~and~~ ~~resizing~~

⑥ Resizing (to make responsive like constraints)

↳ fill container (width)  
 ↓ Fixed height

Icon size - 18x18px

Date: \_\_\_/\_\_\_/\_\_\_

How to make component: fill, text, frame, effect etc

Fill

DDDDDD 100% -

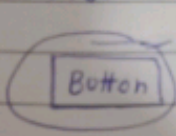

on selecting we can make variable like rgba which will be shown below and later we can edit it with d to change multiple rgba components.

Text

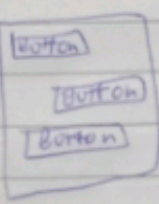

Similar we can do for text

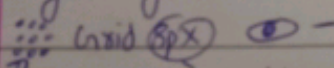

Create component to use it multiple time in Assets section on left side.

select then after that we can use it multiple times.

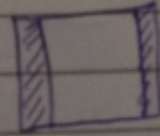

Layout grid (to properly give margin)

we can select only column and row.

Use Material design for layout grid: How much margin from space around

for different devices

Prototype (for anchors + drag hover)

Just select -> Prototype -> in selected item
